Art Unit: 3746

LIST OF CURRENT CLAIMS

1. (Currently Amended) A cooling fan providing enhanced heat dissipating effect,

comprising:

a radiator having a plurality of radiation fins; and

a fan connected to a top of said radiator and including a frame and a plurality of

blades mounted in said frame; said frame having a triangular cross section. So that said

blades are mounted in said frame at an inclined position relative to the top of said radiator

[[;]] whereby such that when said fan operates, airflows produced by said fan are kept

blown-toward said fan creates an air flow directed against side surfaces of said [[a]]

plurality of radiation fins to more quickly carry away heat transferred to said radiation

fins.

2. (Original) The cooling fan as claimed in claim 1, wherein said fan is connected

to the top of said radiator by means of fastening elements.

3. (Original) The cooling fan as claimed in claim 1, wherein said frame of said

fan is provided at outer sides of two lower ends with two slide ways, and said radiator is

provided at upper ends of two outmost ones of said radiation fins with two inward

projected rails corresponding to said slide ways on said frame, so that said fan is

connected to the top of said radiator through engagement of said slide ways with said rails.

4. (Currently Amended) A cooling fan providing enhanced heat dissipating effect,

comprising:

a radiator having a plurality of radiation fins; and

a fan connected to a top of said radiator and including a frame and a plurality of

blades mounted in said frame; and said blades being mounted in said frame at an inclined

position relative to the top of said radiator[[;]] whereby such that when said fan operates,

airflows produced by said fan are kept blown toward said fan creates an air flow directed

against side surfaces of said [[a]] plurality of radiation fins to more quickly carry away heat transferred to said radiation fins.

5. (Original) The cooling fan as claimed in claim 4, wherein said fan is connected to the top of said radiator by means of fastening elements.
